

Teacher Note

Teachers are no strangers to summer learning loss. After all, you're the ones who must spend the first several weeks of school reviewing material that was already learned in the previous year. We'd like to help you with that.

Summer Solutions effectively combats summer learning loss by systematically reviewing all concepts learned over the course of the year using distributed practice, a learning strategy supported by over 100 years of research.

Summer Solutions is a budget-friendly series for parents who want to keep their kids sharp. We urge you to recommend *Summer Solutions* to your students' parents. Pages 2–10 of this document are convenient forms that can be handed out to parents on an individual basis. Page two shows all the summer book options available. The other pages are grade-specific forms that show all the options for each grade level. You may recommend certain books for each child, or you may simply highlight the books you expect all students to complete over the summer. In schools that choose to make summer learning mandatory for students, the entire workbook is usually submitted the following fall and is used for the first grade of the year.

Thanks for using *Summer Solutions*!

(Note: Students should use the *Summer Solutions* books for the grade level just completed. For example, if the student has just completed the third grade, he or she should use third grade *Summer Solutions* books.)

Studies show that during summertime, students can forget up to three months' worth of the English and math skills they've learned during the school year. Our class will be doing its best to keep sharp over the summer months, so I am recommending *Summer Solutions* workbooks. These workbooks review what we've learned and prevent learning loss. They can be ordered at www.SummerSolutions.net.
